Large European Financial Institution Keeps Customer Data Safe with Code Green Networks TrueDLP and Blue Coat ProxySG

Company Profile: A top 20 global financial institution that provides banking, investments, life insurance services and retirement services to meet the needs of a broad customer base.

Industry: Financial Services / Bank

Overview: With an extensive data classification system in place, the wholesale banking business line, of this leading financial institution had extensive knowledge on what data they wanted to protect. Their next logical step was to discover where the data was being stored (desktops/servers), how the data was being used, and understand what workflows were in place that could put the company at risk for a security breach.

The Solution: Simplicity and reliability were key components in choosing the data loss prevention (DLP) solution. They wanted a solution that would not require an army of IT administrators or security experts to install and manage. In addition, they wanted to enhance their security by preventing access to malicious and inappropriate sites.

The organization deployed three Code Green Networks CI-1500 Content Inspection appliances along with a supporting Blue Coat Systems ProxySG appliance. In just hours, the organization was monitoring network traffic and scanning a multi-terabyte storage area network (SAN) for confidential customer data. After just a few weeks of passive monitoring and refining their security policies the system began to block level-one documents from leaving their network.

The Benefits:

- Secure communications with business partners, agents, and brokers
- Validate and refine the current controls on sensitive financial data
- Protect customer account information from being posted on Web 2.0 sites
- Protect customer mortgage documents from being sent out unsecured

About Code Green Networks

Code Green Networks delivers data loss prevention solutions that protect private employee and customer information and safeguard intellectual property across all electronic communications channels. The company’s easy-to-deploy, easy-to-manage content inspection appliances rapidly detect and prevent potential data leaks, helping organizations automate compliance and mitigate risks from internal breaches that can result in loss of revenue, financial penalties and irreparable damage to a corporation’s image, brand and customer loyalty.
